

Care instructions for microfibre

Kvadrat's microfibre products can be dry cleaned, but it is also possible to clean the product at home. The following stain removal guide shows the correct treatment method. In many cases, however, warm water and perhaps a little added soap will suffice. To avoid water marks after treatment, it is necessary to dry the membrane with a hairdryer.

In case that water marks still remain, it is mostly due to detergent/soap so dab with wet towel widely around water marks.

TYPE OF STAIN TREATMENT

BLOOD	Wash off in cold water. If that is not effective, add a mild detergent
CHOCOLATE	Dab with warm water. Then wash. Jam, grass, vegetables: Dab with mild soapy water.
COFFEE, TEA	Soak up as much as possible with absorbent paper.
MILK, BEER, LIQUEUR, RED WINE	Dab with warm water. Then wash using mild soapy water.
KETCHUP	Scrape off with a spoon or knife. Dab with warm water. Then wash using mild soapy water.
COSMETICS	Dab with warm water. Then wash using mild soapy water. Clean, if necessary, with benzene.
BALLPOINT PEN	Rub carefully with white spirits.
PAINT (oil paint)	Rinse with turpentine and dab with soapy water.
PAINT (water based)	Dab with cold soapy water. If it is an old stain, consult a professional cleaner.
OIL, GREASE	Sprinkle talcum powder on the stain and let it take effect. Brush off. Then clean using benzene.
SHOE POLISH	Dab with soapy water. Then, if necessary, clean using benzene.

These are only general recommendations that can not unreservedly guarantee 100% removal of stains.
